-MADE IN TAIWAN-

## STAINLESS / AL-ZN CAPPED SDS

Over the years, climate change has made screws more vulnerable to corrosion. Stainless steel screws are by far the best choice but are too soft to go through steel. Bi-metal screws are another option but they are too expensive.

Our solution: implementing 304 Stainless cap and Aluminum-zinc cap. The caps not only maintain the original needs but improves the performance of screws at a lower cost.

## Anti-rust / Anti-UV

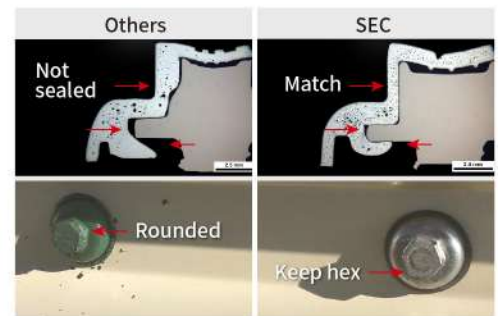

When the cap is implemented in screw heads, it can increase the anti-corrosion capability, allowing it to be placed in extreme environments. Not only does it offer great anti-rust security, it prevents the EPDM washer from deteriorating from UV light exposure.

## Riveting technology

The unique riveting of the screw caps can withstand higher torque. This characteristic increases screws drilling successful rate and expands the application range.

SEC'S NICK POINT

## Common Applications

Metal siding

Highest corrosive environment

## Perfect EPDM

Our cap screws require a customized EPDM washer that can fill the space between the roof and the screw cap. With this, it effectively prevents water leakage.
