

SANN MUO

-MADE IN TAIWAN-

STRUCTURAL WOOD SCREWS

The **TaitanLok** screw is a 6.6mm diameter wooden construction screw.

With a specially designed anti-loosen screwdriver, it can work at high altitude without worrying the screw falling and work injury. There are several choices of advanced versions for thread type which can increase working efficiency. And this is our special KNOW HOW.

Type 17

Cutting grooves helps collect and remove sawdust. And can reduce the percentage of cracking the timber.

Asymmetric Thread

Special angle design can increase pull-out resistance in a variety of applications. Also firmly clinches plates together to close gaps in multi-ply assemblies.

Ribs

Fix firmly, sink cleanly and security into the wood. This can create a flat surface after you screw in.

Special drive

The special drive can match with screws perfectly and improves productivity. There is no need to worry about screws falling when working at high altitudes.

Common Applications

Trusses

Highest corrosive environment
